# MARLOW HUNTER 31

The all-new Marlow-Hunter 31 has now arrived in dealerships, and the demand from discriminating sailors has been so great that the builder is delivering approximately one every week.

The Marlow-Hunter 31 uses a well-proven hull design to rival most 34-foot models. The 30-foot waterline outclasses most boats, and when combined with her Henderson/Marlow chined hull, it offers offshore stability and performance that few can match. At low angles of heel and as the wind freshens, the Marlow/Henderson hull provides superior stability and performance.

The Marlow-Hunter 31 has a beautiful and functional galley. In addition, it sleeps as many as board the sailboat. A separate shower keeps her large head compartment functional with a crowd on board, while the deck arrangement is far larger and more user friendly than one would expect. The available tacking helm makes the skipper's view perfect in all conditions, and it moves aside to provide a very functional cockpit.

All new Marlow-Hunter sailing yachts come with world-class woodwork, high-end furnishings, and cutting-edge technology. Its standard features and equipment can be paired with thoughtful options from top-shelf suppliers such as Bose®, Raymarine, Garmin, Yanmar, Dometic, and others. Buyers can also choose genuine Dupont Corian® and real hardwoods, such as teak and cherry.

Below the hull, one can find the highest gloss retention gelcoats, along with the most advanced hull structure found in the produc-

tion sailing yacht field. The Marlow-Hunter 31 uses unidirectional, purpose designed and highly engineered fabrics and resins, along with Space Age items, such as the Nida Core honeycomb core that is reinforced by Dupont Kevlar®.

In the hull and deck, advanced composite, stainless steel and marine alloy are found under highly loaded deck and hull fittings. The MarGrid® structural backbone is formed by a one-piece high section solid fiberglass grid that extends the DuPont Kevlar® ring frames and bottom laminates to the chain plates, allowing her wide spreader bases to triangulate all loads to a central absorption and cancellation platform. Her hull to deck joint is strong and watertight combining the world's finest adhesives to engineered bolt patterns. The Marguard® solid aluminum bolted cap receives an extruded PVC rub rail that is capped by a polished stainless steel striker allowing the vessel to contact pilings and other objects without scarring the beautiful topsides.
